The Present Anyenchom treaters to imment analyticy to complement related 2C ARC99051). ZACRP6 protein and coding sequence (see AAB49596 and 2C located on human chromosome 21q. zacrp6 gene and protein are useful for 2C diagnosting and treating inflammations, for determining arterial for 2C remodelling, for modulating calcium ion concentration, hormone 2C carachidonate release, phospholipase C activation, gastric emptying, human 2C carcef gene and protein are useful for 2C neutrophil activation or ADCC capability and superoxide anion production. 2C carcefing against bacteria and virus, for complement inhibition, for 2C treating acute vascular injury, disseminated intravascular coagulation, 2C cadipocyte complement related protein homolog zsig39. This protein was 2c used in a sequence homology comparison with ZACRP6 protein was 2c used in a sequence homology comparison with ZACRP6 protein was 2c used in a sequence homology comparison with ZACRP6 protein

These are useful in the treatment of coronary, pulmonary, olfactory, immunological, neurological, developmental and kidney disorders.

CC polymerase chain reaction (PCR) primers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC are to restore normal activity of (II) is useful in gene therapy techniques (CI). (II) is useful for generating antibodies against it, detecting or CC a food supplement. (II) and its binding partners are useful in medical collarating of sites expressing (II). (I) and (II) are useful for treating or CC imaging of sites expressing (II). (I) and (II) are useful for treating classorders involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, identification of mutations in cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human cc specification, but was obtained in electronic format directly from wIPO cat first two solutions of the invention.
                                                                                                                                                                                                                                                                                                                                                                      Claim 20; SEQ ID No 43083; 103pp; English
                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity .
                                                                                                                                                                                                                                                                                                                                                    The invention

                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences of the human and murine secreted or transmembrane proteins TANGO 253, TANGO 257, TANGO 281 and INTERCEPT 258. These are useful in the treatment of coronary, pulmonary, olfactory, immunological, neurological, developmental and kidney disorders.

C;Comment: This protein is a sialoglycoprotein synthesized by alveolar ty pendent on the presence of calcium ions.
C;Superfamily: mannose-binding lectin; C-type lectin homology
C;Keywords: acetylated amino end; alveolar proteinosis; calcium; gaseous
F;1-15/Domain: signal sequence #status predicted <SIG>
F;16-247/Product: pulmonary surfactant protein A #status predicted <MAT>
F;27-99/Region: Collagen-like
                                                                                           F;126-245/Domain: C-type lectin homology <LCH> F;16/Modified site: acetylated amino end (Ser) (in
                                                                                                                                                                                                                                    A;Note: 12-Pro was also found
A;Note: two species of mRNA, which appear to be transcribed fr
A;Note: two species of mRNA, which appear to be transcribed fr
A;Note: the amino end of the mature protein is blocked
A;Note: the amino end of the mature protein is a complex of phospholipids
C;Comment: Tulmonary surfactant is a complex of phospholipids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A;Cross-references: GB:J03542; NID:9165705; PIDN:AAA31465.1; PID:9165706

A:Note: part of the sequence was confirmed by protein sequencing
A:Note: the amino end of the mature protein, which was not identified,
A:Note: clones corresponding to two different proteins were sequenced.
